

Agile Scrum Scenario (15 MCQ)

Points: 7/15

1. Enter your KU ID *

cc026

2. Enter your Name *

SAY Sophea

3. Enter your Course (Cloud/Software/Security) *

Cloud Computing

✓ **Correct** 1/1 Points

4. You are working on a software development project using Agile methodology. During the sprint planning meeting, the team realizes that there are too many user stories to be completed within the sprint duration. The team needs to prioritize the user stories to ensure that the most valuable ones are delivered on time. What should the team do in this situation? *

- ☐ Add more team members to increase the capacity and complete all user stories.
- ☐ Extend the sprint duration to accommodate all the user stories.
- ☒ Collaborate with the product owner to identify the most valuable user stories and prioritize them for the current sprint.

- ☐ Ignore the additional user stories and focus only on completing the stories originally planned for the sprint.

✗ **Incorrect** 0/1 Points

5. You are the Scrum Master of a software development team following Agile practices. During the Sprint Planning meeting, the Product Owner presents a high-priority feature that the team hasn't encountered before and estimates it will take two Sprints to complete. However, the team believes it can be finished within a single Sprint. What should you do as the Scrum Master? *

- ☒ Accept the team's estimation and encourage them to take on the feature in the upcoming Sprint.
- ☐ Overrule the team's estimation and align with the Product Owner's estimate.
- ☐ Facilitate a discussion between the team and the Product Owner to understand the different perspectives and find a mutually agreeable solution.
- ☐ Delegate the decision to the Development Team since they are responsible for estimating their work.

✗ **Incorrect** 0/1 Points

6. A software development team is working on a project using Agile methodology. During the sprint planning meeting, the team estimates the user stories and decides to commit to a certain amount of work for the upcoming sprint. However, halfway through the sprint, the team realizes that they won't be able to complete all the committed user stories within the sprint timeframe. What should the team do? *

- ☐ Extend the sprint duration to accommodate the additional work.
- ☐ Reduce the scope of the remaining user stories to meet the sprint deadline.
- ☐ Hold an immediate retrospective to analyze the reasons for the delay and identify improvement opportunities.
- ☒ Prioritize the incomplete user stories for the next sprint and start working on them right away.

✗ **Incorrect** 0/1 Points

7. You are a member of an Agile development team working on a software project. During the sprint planning meeting, the product owner presents a new feature request that was not previously discussed or prioritized. The team realizes that implementing this feature

will require significant additional effort and may impact the delivery of other planned features. What should the team do? *

- ☒ Accept the new feature request and adjust the sprint backlog accordingly.
- ☐ Ask the product owner to delay the new feature request until the next sprint.
- ☐ Collaborate with the product owner to prioritize the new feature within the current sprint.
- ☐ Reject the new feature request and continue with the original sprint plan.

✓ **Correct** 1/1 Points

8. You are a Scrum Master leading a development team that is working on a software project. The team has been following the Scrum framework for several sprints and has been delivering valuable increments of the product. However, during the retrospective of the latest sprint, the team identifies a major impediment that is hindering their progress. The team believes that resolving this impediment is crucial for the success of future sprints. What should the Scrum Master do in this situation? *

- ☐ Ignore the impediment as the team should be able to handle it independently.
- ☐ Wait until the next sprint planning meeting to address the impediment.
- ☒ Immediately address the impediment by facilitating a discussion with the team and stakeholders.
- ☐ Consult the Product Owner and ask them to address the impediment.

✓ **Correct** 1/1 Points

9. A software development team is following the Agile methodology for their project. During the sprint retrospective, the team realizes that they are not able to complete all the planned user stories within the sprint. What should the team do? *

- ☐ Extend the sprint duration to accommodate the remaining user stories.
- ☒ Prioritize and discuss the unfinished user stories in the next sprint planning session.
- ☐ Remove the unfinished user stories from the project scope.
- ☐ Assign additional resources to the team to complete the remaining user stories.

✓ **Correct** 1/1 Points

10. You are a member of an Agile development team working on a software project. During the sprint planning meeting, the Product Owner introduces a new requirement that was not previously discussed. The team is concerned that adding this requirement will impact the sprint goal and the team's ability to deliver the committed user stories. What should the team do in this situation? *

- ☐ Politely decline the new requirement and ask the Product Owner to save it for a future sprint.
- ☐ Agree to take on the new requirement and adjust the sprint goal and user stories accordingly.
- ☐ Suggest breaking down the new requirement into smaller pieces that can be accommodated within the current sprint.
- ☒ Engage in a discussion with the Product Owner to understand the rationale behind the new requirement and collaboratively determine the best course of action.

✗ **Incorrect** 0/1 Points

11. You are a member of an Agile development team working on a software project. During the sprint planning meeting, the team estimates that they can complete 20 story points worth of work in the upcoming sprint. However, the product owner insists on adding an additional 10 story points to the sprint backlog. What should the team do? *

- ☐ Accept the additional 10 story points and adjust the sprint plan accordingly.
- ☐ Reject the additional 10 story points and stick to the original sprint plan.
- ☐ Negotiate with the product owner to prioritize the additional work for a future sprint.
- ☒ Seek guidance from the Scrum Master to resolve the conflict.

✗ **Incorrect** 0/1 Points

12. You are a Scrum Master for a software development team working on a project. During the Sprint Planning meeting, the Product Owner provides a list of user stories to the team. However, some of the stories are vague and poorly defined, making it difficult for the team to estimate their effort accurately. What should you do in this situation? *

- ☐ Proceed with the planning meeting as scheduled and let the team figure out the details during the Sprint.

- ☐ Ask the Product Owner to clarify the vague user stories before proceeding with the planning meeting.
- ☐ Make assumptions about the user stories and estimate their effort based on the available information.
- ☒ Skip the Sprint Planning meeting and schedule a separate meeting with the Product Owner to discuss the vague user stories.

✓ **Correct** 1/1 Points

13. You are a Scrum Master for a software development team. During the Sprint Planning meeting, the Product Owner informs the team that the scope of the project has changed, and they need to add several new features to the product. The team is concerned that these additions will affect their ability to complete the Sprint within the allocated time. What should the Scrum Master do in this situation? *

- ☐ Encourage the team to work extra hours to accommodate the new features.
- ☐ Ask the Product Owner to prioritize the new features and remove some existing ones.
- ☐ Suggest the team take on the additional features and adjust the Sprint duration accordingly.
- ☒ Facilitate a discussion between the team and the Product Owner to find a compromise.

✓ **Correct** 1/1 Points

14. You are part of an Agile development team working on a software project. During a sprint, the team encounters a technical issue that requires a significant amount of time to resolve. The team realizes that they won't be able to complete all the planned user stories within the sprint. What should the team do? *

- ☐ Extend the sprint duration to accommodate the extra work.
- ☐ Remove the incomplete user stories from the sprint backlog and continue with the remaining ones.
- ☒ Discuss the issue with the product owner and collectively decide which user stories are the highest priority and should be completed within the sprint.
- ☐ Add the incomplete user stories to the next sprint backlog and continue working on them.

✗ **Incorrect** 0/1 Points

15. You are the Scrum Master of a software development team following Agile principles. During the Sprint Planning meeting, one of the developers suggests adding a new feature to the product backlog that was not part of the original scope. What should you do? *
- ☐ Accept the developer's suggestion and add the new feature to the product backlog.
 - ☒ Inform the developer that the new feature cannot be added as it was not part of the original scope.
 - ☐ Discuss the new feature with the Product Owner and evaluate its priority and impact on the project.
 - ☐ Ask the team to vote on whether or not to include the new feature.

✗ **Incorrect** 0/1 Points

16. You are part of an Agile development team working on a software project. During the sprint planning meeting, the Product Owner introduces a new user story that has a high business value and is expected to take more effort than the other stories in the sprint. The team is concerned that committing to this story might jeopardize the completion of other planned stories. What should the team do? *
- ☐ Reject the new user story to maintain the sprint commitment.
 - ☐ Increase the sprint duration to accommodate the additional effort.
 - ☐ Negotiate with the Product Owner to prioritize the new user story within the existing sprint commitment.
 - ☒ Split the new user story into smaller, manageable stories.

✓ **Correct** 1/1 Points

17. You are a member of an Agile development team working on a software project. Your team has been using the Scrum framework for managing the project. During the Sprint Review, the stakeholders provide feedback and request changes to the product. What should the team do next? *
- ☐ Immediately incorporate all the requested changes into the product
 - ☐ Schedule a meeting with the stakeholders to discuss the requested changes.

- ☒ Assess the feasibility and impact of the requested changes before making a decision
- ☐ Ignore the stakeholders' feedback and continue with the next sprint.

✗ **Incorrect** 0/1 Points

18. You are working as a project manager in a software development company that follows Agile methodology. During the sprint planning meeting, one of your team members suggests adding additional features to the project scope. However, you realize that the proposed features would significantly increase the project's timeline and may jeopardize the delivery date. What should you do? *
- ☐ Accept the additional features and adjust the project timeline accordingly.
 - ☐ Reject the additional features and stick to the original project scope.
 - ☐ Collaborate with the team to understand the impact of the additional features on the timeline and make an informed decision.
 - ☒ Escalate the issue to senior management for a final decision.
